FOREWORD
to
2023 REVISION

In October of 2020, the Heywood Meadow Stewardship Committee (the Committee) undertook a review of the 2005 Landscape Plan (the Plan) both to serve as an assessment of its progress relative to the goals and recommendations set out in the Plan, and as a report to the Natural Resources Commission (NRC) which established the Committee at its meeting on July 19, 2000, as one of its sub-committees.

In **Section 1. Introduction**, **Section 3. Analysis and Evaluation**, and in **Section 4. Treatment Recommendations**, the original text of the 2005 Plan is retained in its entirety in black type. The Committee's response to each goal and recommendation in the original text and any additional goals or recommendations added by the Committee will be found in blue colored type.

No revisions were made to **Section 2. Site History**.

REVISED EXISTING CONDITIONS PLAN (2023)

PRESERVATION PLAN

1. INTRODUCTION

BACKGROUND

Heywood Meadow in Concord, Massachusetts has a remarkable history that extends back to the earliest use of the area by Native Americans. It is a surviving feature from one of the first inland settlements in the United States, established in 1635; it was part of the Mill Pond, constructed in 1636 to power Concord's early industries; it was witness to the events of April 19, 1775; it was a source of inspiration to Concord's nineteenth century literary figures; and it remains an evocative link with nearly 370 years of Concord's history. It is also a significant natural resource that is valued for its role as wetland, flood storage area and wildlife habitat, and as a unique open space prominently located near the center of town.

Heywood Meadow remained in private ownership for over three centuries and was used for agricultural purposes into the early twentieth century. After World War II it was perceived as "vacant" land, with proposals made for various uses, including a fire and police station in the 1950s; a county courthouse in the 1960s; and an expanded visitor information center in the 1990s. In 2000, after several decades of intense debate, the town of Concord designated the final parcel of Heywood Meadow as conservation land, thereby placing the entire area under a permanent conservation restriction. Now that consensus has been reached about preserving Heywood Meadow as open land, attention has turned to stewardship of the property.

In early 2004 the Heywood Meadow Stewardship Committee, in conjunction with the Natural Resources Commission, commissioned Hines Wasser and Associates LLC and Shary Page Berg to prepare a landscape preservation plan for Heywood Meadow. This project is envisioned as the first step in developing a long-term preservation strategy for the meadow. Subsequent efforts will be needed to develop a landscape maintenance/management plan and to fund physical improvements. The Landscape Preservation Plan includes:

- documentation of the physical evolution of Heywood Meadow
- evaluation of the meadow's historical, environmental and landscape significance and the elements that contribute to its character
- a sustainable plan that evokes the historic appearance of the site and addresses issues of ecological health, public use and interpretation

Extensive work has already been done on the history of Heywood Meadow. This project focuses on reviewing and synthesizing previous research to provide an understanding of the appearance of the meadow at various points in time. Primary sources were Richard Forman's "Concord's Mill Brook: Flowing Through Time" and the work of historian Anne McCarthy Forbes, which is documented on Massachusetts Historical Commission inventory forms. The files of the Natural Resources Commission and Heywood Meadow Stewardship Committee provided valuable information about recent events. Leslie Wilson at the Concord Free Public Library graciously provided access to materials in the Special Collections during a difficult transition period for the library.

Funding for the Heywood Meadow Landscape Preservation Plan was provided by the Town of Concord through its Natural Resources Commission. Markus Pinney, NRC Administrator, was the town's project manager. Members of the Heywood Meadow Stewardship Committee provided input to the plan.

BACKGROUND TO THE ANNOTATED PLAN – Fall 2021

In October of 2020, the Heywood Meadow Stewardship Committee (the Committee) undertook a review of the 2005 Landscape Plan (the Plan) both to serve as an assessment of its progress relative to the goals and recommendations set out in the Plan, and as a report to the Natural Resources Commission (NRC) which established the Committee at its meeting on July 19, 2000, as one of its sub-committees. The Committee recommends that a copy of this review also be provided to the Historic Districts Commission (HDC) and the Concord Historical Commission (CHC).

The opportunity to step back from the current business of the Committee and reflect on its mission and goals has enabled more recent members to acquire a better understanding of the Committee’s original objectives and the commitments made to those townspeople who provided essential support, including financial support, to the cause of preserving the meadow as a historic asset.

The Committee worked through the goals and recommendations in the Plan to establish whether each goal had been met and each recommendation followed. This document is the result of those discussions. It is best described as an annotated plan because the findings have been embedded in the original document and presented in contrasting color, just as this Background section in blue follows the original Background section above.

It is important for the reader to appreciate two things. First, when the 2005 Plan was prepared by Hines Wasser & Associates LLC and Shary Page Berg FASLA, it was thought that the land shown in “light tone” in Figure 11 was municipal land, not conservation land that was part of Heywood Meadow. This had already been researched by Town Counsel in 1983 and established conclusively as part of the meadow but was not picked up in the 2005 Plan. This “light tone” area has subsequently been referred to as Parcel B. Thus, Heywood Meadow now represents 8.3 of the 1,500 acres, or 0.6%, of the conservation land managed by the Natural Resources Division of the town.

As a result of the omission of Parcel B from the Plan, the goals and recommendations in the Plan do not address the full range of opportunities currently available to the Committee on the meadow and render some of the goals and recommendations incomplete and, in some cases, impractical. As a result, the Committee has recommended revisions to the goals and mission statement where necessary.

It is also important to recognize that the Concord Wetlands Bylaw was passed by Town Meeting in 2009, four years after the original Plan was prepared. This added a 25-foot No Disturb Zone to the list of other restrictions contained in the Massachusetts Wetlands Protection Act (1972) and the Massachusetts Rivers Protection Act (1996) and puts further controls on what may be done to open up scenic vistas onto the Mill Brook that did not exist in 2005.

The Committee is currently led by co-chairs **Joanne Gibson** and Susan Clark. Members currently include Lola Chaisson, **Mary Clarke**, Beverly Miller, Cris Van Dyke, Stanley Lucks, Murray Nicolson, and Sandy Smith. (Names in bold type indicate original members of the Committee whose length of service and perspective are greatly appreciated by the other members.) Mr. Smith represents the Concord Independent Battery, whose Gun House has been located on the east meadow since 1960. Having a representative of the Battery on the Committee has improved communication with one of the Committee’s primary constituencies and has proven mutually educational. The Committee should plan continued liaisons with historic committees and individuals.

In addition to reviewing the 2005 Plan, the Committee has also reviewed its charge which remains unchanged since it was originally written in 2000. The Committee recommends that it review and update its charge for NRC review and approval.

Recognizing there are limits to any self-evaluation, the Committee recommends that the NRC consider holding a public meeting to present the updated Master Plan and gather input from the community as part of its evaluation of the Committee's stewardship.

Finally, the Committee wants to acknowledge the expert guidance provided by Delia Kaye, Natural Resources Director, whose energy and enthusiasm for the stewardship of Heywood Meadow, and whose flexibility in working with the Committee, is greatly appreciated.

SUMMARY OF FINDINGS

At one time Heywood Meadow was part of a much larger meadow that extended along the Mill Brook watershed. Now it is a remnant of this historic landscape that has increased in value to the community as it has become more unique. Heywood Meadow has evolved over time but for more than three centuries its essential quality has been as an open meadow. Over the past century many pressures have been brought to bear on the meadow. Fortunately major development has been averted but incremental change has subtly altered the character of the landscape. The stream edge has grown up with invasive vegetation, the meadow grasses have become mowed turf, and stone walls have crumbled and been poorly repaired. The landscape around the meadow has changed as well. Activities that occur around the meadow, such as road improvements and increased traffic, also intrude on the strong sense of place.

The mission statement of the Heywood Meadow Stewardship Committee offers a simple but powerful vision for the future of the meadow.

“To rehabilitate all of Heywood Meadow (Lots A, 1, 2, 3 and Ford Park), so as to evoke the Meadow’s historical and agricultural past. This historic landscape should reflect the period from Colonial settlement through Concord’s Literary Renaissance (late 1800s). The rehabilitated meadow will accommodate passive recreation and further the conservation goals of the Town of Concord.”

This is supported by the following goals.

Emphasize Heywood Meadow as the welcoming entry to the Town of Concord and a prominent reminder of Concord’s agrarian past.

Unify the Meadow’s separate parcels with the use of common plant treatments.

Evoke the agricultural past of Heywood Meadow through the addition of historically appropriate plantings, fencing, walls, and field management practices.

Protect the Mill Brook Corridor and its watershed to promote an ecologically sound and scenic stream environment.

Reconnect Heywood Meadow to other historic landscapes and structures by selectively creating open views to related areas and making recommendations to the Town Manager regarding maintenance of adjacent town parcels.

Enhance the Meadow’s scenic and contemplative qualities and highlight its historical relationship with adjacent 18th and 19th century structures and roads, especially the historic Bay Road (Lexington Road) and Potter’s Street (Heywood Street).

Remove structures and associated landscape elements that do not relate to the time period established for the rehabilitation. These will include, but may not be limited to: the garage on Lot 3, the information booth on Lot A, and associated paved areas. The Concord Gun House will be retained.

2. SITE HISTORY

This chapter provides an overview of the history of Heywood Meadow using images and text to document its appearance and physical evolution over time. It is organized into five major chronological periods.

PRE-CONCORD AND SETTLEMENT PERIOD (1500 - 1655)

Musketaquid: Native Americans in Concord's Mill Brook Area

The land that is now Concord, Massachusetts was used by Native Americans for centuries before the English settlers arrived. Most of the area was covered with old growth forest, but there would also have been clearings, either natural or manmade. The area was known as Musketaquid or marsh grass river because of the extensive wet meadows along the Concord River and its tributaries. During the Late Woodland period (circa 1000 - 1600) native people migrated throughout the area and had seasonal hunting, fishing and farming camps near the mouth of the Mill Brook, a particularly fertile area.

Ecologist Richard Forman, author of "Concord's Mill Brook: Flowing Through Time," provides a compelling description of the pre-Concord appearance of Heywood Meadow, located a short distance up the Mill Brook from its junction with the Concord River.

"Before Concord a clear curving brook here drained three square miles of forest land, and on its northeast side flowed along the base of the ridge. Just upstream the area was probably heterogeneous, with patches fluctuating over time from swamp to beaver pond, marsh, mudflat and meadow. Fish, including migrating alewives from the sea, were often abundant in pools formed by fallen trees and shaded by continuous cover. Late Archaic People more than 3000 years ago migrated through the area mainly in spring and autumn. They had a base camp upstream of Heywood Meadow for hunting and fishing and some years would have migrated there for months at a time." (Forman, page 28)

When English explorers first visited Musketaquid in the early seventeenth century, they noted the extensive meadows, the network of Native American trails, and the small "planting grounds" in the area. Fish and game were abundant and the extensive river system provided a convenient transportation corridor, particularly in the spring when water was high. English colonists chose Musketaquid as a place to establish a settlement because of its plentiful natural resources and the presence of the friendly Algonquin tribe.

English Settlement

In 1635 the colonists created an inland settlement at Musketaquid, which they named Concord. The settlers received a land grant from the English king that included a six miles square area located about twelve miles northwest of Boston along the Concord and Assabet Rivers. The town center was established along the Mill Brook with houses clustered around the meetinghouse. In 1636 the settlers dammed the Mill Brook to provide power, creating a mill pond that extended upstream to Heywood Meadow. This was the first of many changes that altered the ecology of the brook.

The first land division included houselots of three to eight acres for each of about twelve families, while the rest of the town remained common land used for cultivation, hay and pasturage. Houses typically faced south and had their gardens and orchards clustered nearby with their woodlot on the adjacent hillside. Most of the early houselots were laid out along the north side of Bay Road (now Lexington Road) with houses facing south and along the south side of Watertown Road (now Walden Street). The fertile low lying area along the Mill Brook was used primarily for pasture as meadow grass were plentiful and water was readily available to the livestock.

One of the first settlers was Luke Potter, whose houselot included the land north of the Mill Brook known today as Heywood Meadow. Unlike most of the other early settlers, Potter chose to build his house on the south side of Lexington Road adjacent to the Mill Brook. Richard Rice, another early settler, also chose to build his house adjacent to the Mill Brook, rather than on the uphill side of Watertown Road. Forman describes the appearance of the area during this period.

“This was Luke Potter’s lot, one of the original long narrow parallel lots extending from the brook northward up over the ridge to common grazing land beyond. A road and ford across the brook at this point connected the northern and southern parts of town. From the ford down to the milldam stretched the town’s mill pond. A muddy Bay Road at the base of the ridge connected Concord with Cambridge, Boston and indirectly, England. Some forest cover was removed for pastures. Work began on straightening the brook and draining adjacent wetlands to form ditches in which livestock sloshed around. The brook was straightened both upstream and downstream of today’s bridge.” (Forman, page 28)

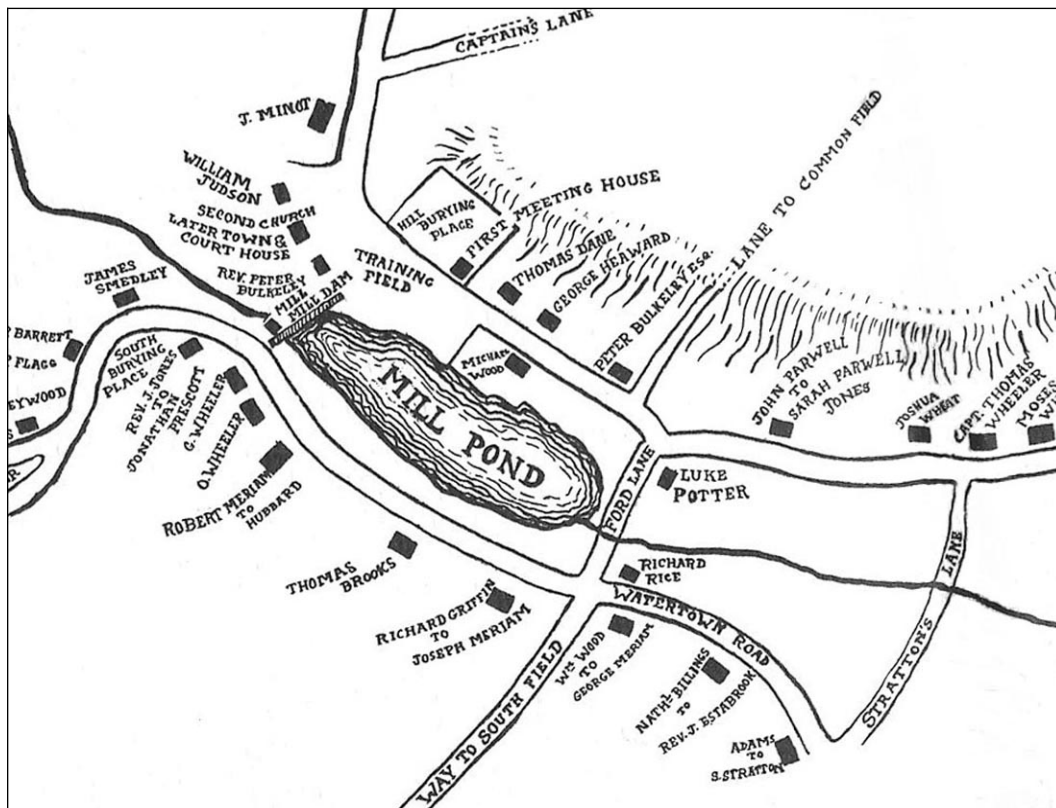

Figure 1. This detail of a plan by Ruth Wheeler shows Concord center during the seventeenth century. Heywood Meadow extends roughly along the north side of the Mill Brook from the right of the Mill Pond to Stratton's Lane (which no longer exists). Ford Lane is the present Heywood Street. (Reproduced from Wheeler, *Climate for Freedom*.)

FOREST TO FARMLAND PERIOD (1655 - 1828)

Second Division to Revolutionary War

The period from 1655 to 1775 marked an extended period of growth for Concord as a town and the evolution of the landscape from predominantly forest to mostly open fields. The common theme throughout this period was agriculture, which occupied most of the community and shaped land use patterns.

The population grew rapidly during Concord's early years, with newer houses built out from the town center along the major roads. The second land division in 1655 converted much of the common land surrounding the village to large farms, altering the settlement pattern from a compact village cluster to a more dispersed pattern of scattered farms. A meetinghouse was built next to the mill pond in 1673 and rebuilt in 1712. Other features of the community during its early years included a burial ground, an animal pound, a mill and training fields. The north/south route across the Mill Brook west of Luke Potter's house (now known as Heywood Street) was established as a ford early on and served as an important part of the town's circulation system. A major change in circulation occurred in 1742 when a road (now Main Street) was constructed across the milldam.

As the village grew and more of the land was converted to agricultural use, the Mill Brook became polluted. Forman describes Heywood Meadow during this period,

“Upstream trees were progressively axed for fuel and pastureland, such as the Town Meadow on Mill Brook south of Meriam's Corner, and also for hayfields and cultivation. Peak flows of water in spring and after heavy rains increased, and hence large floods came more often. Sediment washed into the muddy brook, and then was largely scoured out in floods. Logs, pools and fish decreased. Most nearby houses of the era persisted to the present, including the stylish 1719 saltbox at 105 Lexington Rd. and the 1788 house, tavern, and store at 92 Walden St.” (Forman, page 28)

Luke Potter's houselot was divided among various members of his family before his death in 1697. Much of it, including the original farmhouse, went to his son Judah, who was killed when the house burned in 1731. John Brown, Judah's son-in-law, acquired the land immediately north of the old homestead in 1719 and built the house at 105 Lexington Road known today as the Beaton-Heywood house, which followed the traditional settlement pattern of houses on the north side of the road. When John Beaton bought the house in 1739 he also acquired the pastureland between Lexington Road and the Mill Brook east of Heywood Street that included the site of the former Potter house and a barn located nearby (Lot A). In 1747 Beaton acquired more land from the Potter family, including the area on the west side of Heywood Street (Lots 1, 2 and 3) which was designated as “plowland and meadow.”

Revolutionary War and Federal Period

The April 19, 1775 battle between the British redcoats, colonial militia and the Massachusetts minutemen is one of the best documented events in American history. Much of the land on which the battle occurred is now part of Minute Man National Historical Park, which has been gradually restoring the historic battle route. Heywood Meadow lies directly adjacent to Lexington Road, also known as the Battle Road, and was witness to the arrival of the British on their way to the North Bridge and to their departure, hastened by the minutemen and colonial militia who traveled along Revolutionary Ridge shooting from cover of the trees.

Historian Ruth Wheeler in *Concord: Climate for Freedom* reports that young Dr. Abel Prescott, a Concord resident who had sounded the alarm to Sudbury and Framingham,

“ . . . returned at noon along Walden Street to see the British starting their retreat along the Bay Road. A shot was fired from the millbrook meadow and he was wounded. He took refuge in the widow Heywood’s house where his wound was treated but in his weakened condition he fell a prey to dysentery and died in August.” (Wheeler, page 115)

*Figure 2. This painting by Ralph Earle documents Concord center on April 19, 1775. Lexington Road, with troops of British redcoats marching along it, is near the center of the picture. The meetinghouse is at the far left with the Mill Pond behind it. (Reproduced from Wheeler, *Climate for Freedom*, the original is at the Concord Museum)*

Concord continued to grow in the post-war period but access to Boston remained difficult as the roads were still relatively poor. Most Concord residents continued to farm, growing what they needed for their own family and perhaps some to trade in town. One major change in the physical appearance of the center of town was the draining of the Mill Pond in 1828.

The Beaton property, including Heywood Meadow and the house at 105 Lexington Road opposite Heywood Street, passed through the Prescott and Fay families in the latter part of the eighteenth century. Jonathan Fay owned the property at the time of his death in 1811. There were probably several barns and small outbuildings on the east side of the meadow at that time, as shown on a map by Edward Jarvis for the 1820-1830 period (see Figure 3). Anne Forbes also reports that by 1810 shoemaker William Bowers had built a house, barn and shoe shop on the section of the meadow east of Heywood Street that is known today as Lot A (letter dated July 15, 1998). Jonathan Fay left his property to his children. (Note: see Figure 11 on page 15 for location of Lot A.)

Figure 3. This detailed drawing by Edward Jarvis shows Concord center in the 1820s. Heywood Street is at the lower right corner, with several small sheds along its south side. (From Jarvis, *Traditions & Reminiscences of Concord, Massachusetts, 1779-1878*. This plan has been rotated to correspond with the orientation of other maps.)

LITERARY AND RAILROAD PERIOD (1828 - 1915)

Economic and Social Transition

As roads improved, travel between Boston and Concord became easier and Concord farmers began producing crops for sale in the city. Arrival of the railroad in 1844 made access to Boston even easier and brought many new residents to Concord. Some came as visitors, drawn by the fresh air and charm of the village, and later bought summer residences or even moved to the community permanently. Among those drawn to Concord were many of the nineteenth century's most prominent writers, social reformers and intellectuals. Ralph Waldo Emerson, Henry David Thoreau and the Alcotts were among the writers who drew their inspiration from the community and its pastoral landscape. Thoreau wrote in 1855:

"I walk along the Mill Brook below Emerson's, look into it for some life . . . Perhaps what most moves us in winter is some reminiscences of far-off summer. How we leap by the side of open brooks! What beauty in the running brooks! What life! What society! The cold is merely superficial; it is the summer still at the core, far, far within."
 (Henry David Thoreau, *Journal*, January 12, 1855, quoted in *Heywood Meadow brochure*)

Despite the changing economy, physical changes were gradual. New houses were added slowly as the community grew. Those living in the village no longer needed large barns and numerous outbuildings as they were producing food primarily to supplement what they could buy in town or from those who continued large-scale farming.

Jonathan Fay's daughter Lucy married Dr. Abiel Heywood in 1822. He gradually bought the holdings of the other Fay children, eventually acquiring extensive land that included the former Beaton house, as well as land south of Lexington Road (Lots 1, 2 and 3 and most of Lot A as shown of Figure 11 on page 15) and over the ridge to Bedford Street. Some time after 1864 he bought the portion of Lot A owned by the Bowers family and subsequently tore down the buildings located on it. Forman, in his description of this period wrote,

"Despite a few structures that were built and removed, the meadow basically remained a meadow, orchard, or garden. A vegetable cellar was dug into the bank of the brook even in the 20th C. The upstream drainage basin was mostly deforested, and the muddy brook flowing through the farmland alternated between a fickle trickle and a massive flood. On Walden St. 19th C houses were added between older homes." (Forman, page 28)

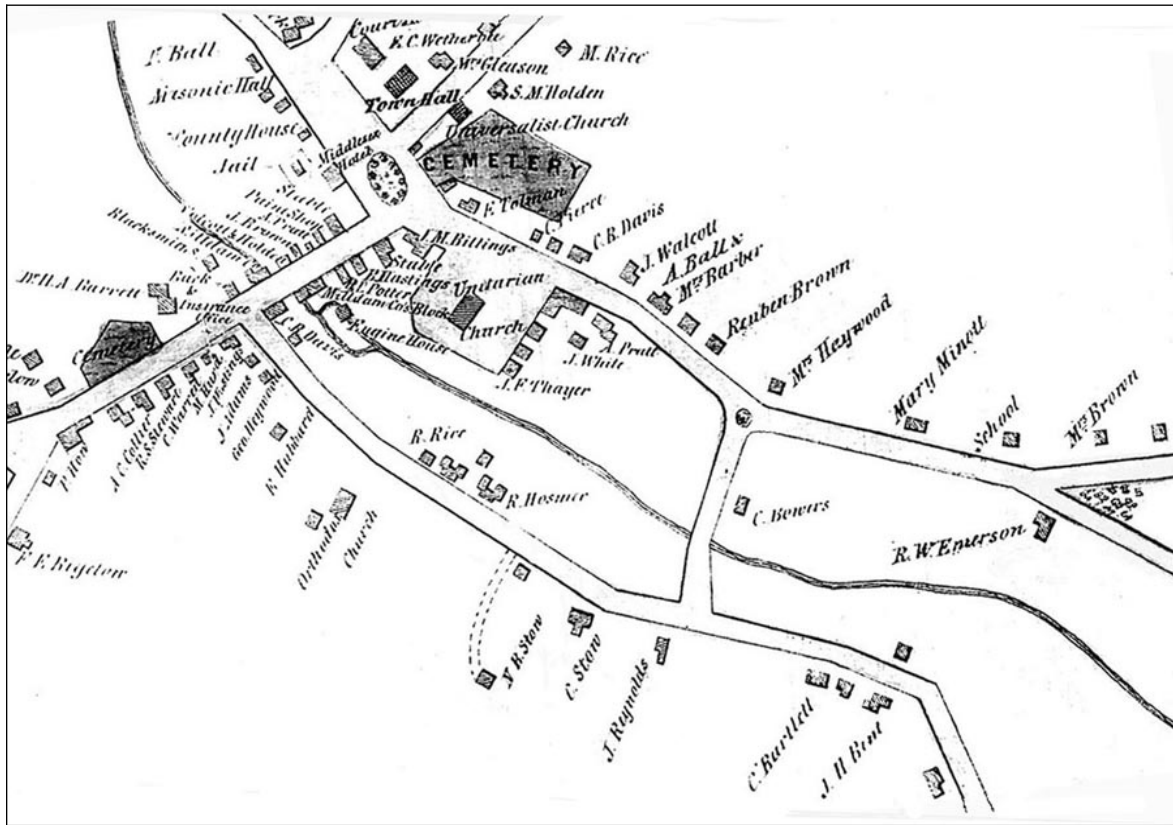

Figure 4. Detail of 1852 map showing Concord center. The Mill Pond is gone, the Bowers house is located east of Heywood Street and R.W. Emerson's house lies just to the east of the meadow. (Concord Free Public Library)

Figure 5. This view was taken around 1900 just east of Heywood Meadow near where the present police station is located. It illustrates the openness of the landscape and the quality of the meadow at that time. The Emerson house is visible in the background at the left side of the photo. (Concord Free Public Library)

Figure 6. This view of the Beaton Heywood house was taken from Heywood Street circa 1880 by Alfred Hosmer. Note board fence at right. (Concord Free Public Library)

EARLY AUTOMOBILE PERIOD (1915 - 1947)

The pastoral quality of the Concord landscape that existed during the late nineteenth century began to change in the early twentieth century with the arrival of the automobile. By World War II there was little active farming, although some residents maintained gardens for personal use. During this time Heywood Meadow continued to be owned by descendants of the Heywood family, reflecting a remarkable period of more than 300 years of ownership by one family.

Figure 7. This 1935 aerial view shows the predominance of open meadow, the openness of the brook channel and the street trees along Heywood Street and Lexington Road. There is tilled land at the northwest and northeast corners of the meadow and a small orchard east of Heywood Street. (Natural Resources Commission)

Figure 8. This view of Heywood Meadow looking east from Heywood Street was taken in 1942. The Emerson house is visible at the left and there is a barn at the far right where the police station now stands. (Concord Free Public Library)

PUBLIC USE AND STEWARDSHIP PERIOD (1947 - PRESENT)

Once Heywood Meadow was no longer used for agriculture, it was perceived as vacant land. During the latter part of the twentieth century, the meadow was subject to multiple proposals for development, which generated considerable debate within the community and helped to clarify the significance of Heywood Meadow to the town.

The first proposal for a new use came in 1947 when town meeting voted to acquire the northeastern portion of the meadow (Lot A) as the site for a new police and fire station. In 1955 the town rejected that earlier proposal and voted instead to erect the building at the corner of Walden and Heywood Streets. This site was rejected in 1958. The present police and fire building was ultimately erected further south along Walden Street where there was more room to accommodate it. The decision not to build on Heywood Meadow was made largely out of concern for the Mill Brook, in recognition of the importance of the brook and its associated wetlands for flood storage. By 1949 the town had already begun acquiring land along the Mill Brook valley as a flood control measure. This program of land acquisition and stream conservation has continued to the present day.

In 1960 the town acquired the northeastern portion of Heywood Meadow known as Lot A by eminent domain. Around the same time a reproduction gun house was erected at the eastern end of Lot A to house the equipment of the Concord Independent Battery. Lots 1, 2 and 3 on the western side of Heywood Street remained in private ownership and sometime between 1948 and 1960 Edith Sellors, the owner, erected a garage on Parcel 3. In addition, a small visitor information center previously located in the town center was relocated to the westernmost side of Lot A in 1967 or 68, initially as a temporary measure.

In the early 1960s, Concord was becoming aware of the need to document and protect its historic resources. This was prompted in part by increased development, which was putting pressure on the town center, and also by creation of Minute Man National Historical Park in 1959. In 1961 Concord created several historic districts and a Historic District Commission. Part of the purpose of the historic districts was to establish an appropriate setting for and protection of historic buildings, places and districts. Heywood Meadow was included in the American Mile Historic District, primarily as a setting for and protection of the adjacent houses along Lexington Road.

Another major controversy over use of Heywood Meadow began in 1968 when Middlesex County proposed to build a courthouse there. The town was unified in its opposition to this proposal. The Board of Selectmen argued,

“The British Regulars marched past this land to suppress the Patriots and they struggled east past this land in their retreat after the battle at the Bridge. Ralph Waldo Emerson and the Alcotts were neighbors; they walked on this land and wrote about it. Henry David Thoreau passed it almost daily in his trips to and from Town to Walden Pond and his farm. A vital ingredient in Concord’s modern day life is this interest and devotion to past happenings that has allowed Concord to retain, for the whole nation to observe and appreciate, the area as it existed at the time of the happenings.” (1968 letter from Board of Selectmen to County Commissioners about possible taking of Heywood Meadow, as quoted in Heywood Meadow Timeline, Appendix 9)

The Natural Resources Commission in a 1969 letter to the County Commissioners wrote,

“The most important single project undertaken by the Concord Natural Resources Commission . . . has been the ‘Millbrook Valley’ project. A broad, low lying meadow and marshland of several hundred acres lies to the east of the Town and is drained by the ‘Millbrook.’ To preserve this watershed and prevent flooding, the Town, with financial help from the Commonwealth and from [the Department of Housing and Urban Development] through a grant for Open Space Acquisition has acquired some 130 acres along the Millbrook, upstream from Heywood Street. The Heywood St. site proposed for the Courthouse is a vital part of the flood control aspect of this project. To improve and pave this last safety valve for floodwater . . . would in our opinion be a most ill-advised undertaking . . . In this case the ‘Heywood Meadow’ has been left open for several excellent reasons (historical, parkland, scenic, and flood control) and as such, is playing an important role in maintaining the physical balance of this community.” (1969 letter from John Bordman of the Natural Resources Commission to County Commissioners in anticipation of land being taken for a county courthouse, Heywood Meadow Timeline, Appendix 10)

Despite these objections, in 1969 the County Commissioners took the eastern portion of Heywood Meadow (Lot A) by eminent domain to build a courthouse. Concord's Town Meeting voted unanimously to protest the county's taking and to transfer control of the meadow to the Natural Resources Commission for conservation purposes.

“We do this because of our deep-seated conviction that this Town land should be kept in its natural state, being not only an integral part of our Historic District but also a vital part of our Mill Brook Valley which the town desires to preserve under the control of our National Resources Commission.” (1969 Town Meeting vote, Heywood Meadow Timeline, Appendix 11)

Ultimately the courthouse was built on Walden Street a short distance south of Heywood Meadow. While the debate had pointed out the vulnerability of the meadow and catalyzed support for its protection, there was still no consensus about the future of the meadow.

Concord's Monument Square/Lexington Road Historic District, which includes Heywood Meadow, was listed on the National Register of Historic Places in 1977. Like many early National Register nominations, this one was brief by today's standards and focused primarily on buildings. The gun house, mistakenly identified as a circa 1900 building, was listed as a contributing resource. Heywood Meadow was not specifically identified by name in the nomination.

The town's 1985 Open Space and Long Range Plan identified Lots 1, 2 and 3 on the west side of Heywood Street as a priority for public acquisition. The plan cited the need for protection of open space in the town center, the desirability of important scenic vistas, and the value of acquiring land contiguous to existing open space. However, in 1985 the town voted not to accept a gift of Lots 1 and 2 because the gift was contingent on the town building a visitor center on the site. Reasons cited for not wanting a visitor center there included loss of open space, traffic danger, cutting of large trees and negative impact on the area. Ultimately the town voted to purchase Lots 1 and 2 with a combination of public and private funds that had been raised for the purpose. Both lots were designated as conservation land. Lot 3 was not available at the time.

In December 1994 the Concord Business Partnership, Concord Chamber of Commerce and Concord Selectmen signed a memorandum of understanding to purchase Lot 3, the last privately held piece of

Heywood Meadow, and to build an expanded visitor center on it. There was strong opposition to this proposal and a month later the “Friends of Heywood Meadow '95” was formed to ensure that Lot 3 be used solely for conservation and to encourage another resolution of the visitor center issue. In 1996 the Mill Brook Valley Group was formed to promote activities related to preserving and protecting the Mill Brook. The dialogue about whether a visitor center should be located on Heywood Meadow continued for several years, with heated debate on both sides of the issue.

The issue received state-wide publicity in 1998 when Heywood Meadow was named one of the state’s ten most endangered historic resources by Historic Massachusetts Inc. Ultimately the new visitor center was sited on Main Street and in 2000 Lot 3, the last unprotected Heywood Meadow parcel on the north side of the Mill Brook, was designated conservation land, ending the debate about development of the meadow.

In August 2000 the Natural Resources Commission appointed a Heywood Meadow Stewardship Committee to establish a plan for the meadow and to assist with long-term preservation. In 2002 and 2003 the town submitted grant applications to the Department of Environmental Management (renamed Department of Conservation and Recreation in July 2003) for a proposed Heywood Meadow landscape preservation project. The goal was to ensure long-term protection of the site and its many layers of history reflecting the evolving physical development and cultural values of the town. The proposed work included: preparation of a landscape preservation plan and a preservation maintenance plan, as well as stabilization of an existing stone wall. Another key goal of the plan was to support the Stewardship Committee’s fund raising efforts for implementation of the plan and to assist the town with budget and maintenance planning.

While funding was not received, the grant application process helped to articulate goals for treatment of the Heywood Meadow landscape and to identify key tasks. Activities to date include: removal of the garage and visitor center; elimination of the parking area along Heywood Street; accommodation of two local clapper stones; planting of antique species of apple trees; selective removal of invasive vegetation; and experiments with different mowing regimes to create low-maintenance grass with a meadow-like appearance. The Landscape Preservation Plan, begun in 2004, represents another important step in articulating a vision for the future of Heywood Meadow. The town has recently rebuilt the Heywood Street bridge.

Figures 9 and 10. Since 2000 the garage on Lot 3 (left) and the Visitor Center on Lot A (right) have been removed, as first steps in the rehabilitation of Heywood Meadow.

3. ANALYSIS AND EVALUATION

AREAS OF SIGNIFICANCE

Like many cultural landscapes, Heywood Meadow has multiple areas of significance that encompass historical, natural and open space values. It is listed on the National Register of Historic Places as part of the Concord Monument Square/Lexington Road National Register District and is included in the American Mile Local Historic District. Part of Heywood Meadow is a protected wetland, and portions have been designated conservation land by the town of Concord. The multiple areas of significance provide an understanding that is fundamental to stewardship of the site.

- ***Pre-Concord History***

The Mill Brook valley, which includes Heywood Meadow, was an important Native American hunting area and campsite for centuries before European settlement.

- ***Settlement History***

Heywood Meadow was the houselot of Luke Potter, one of Concord's first settlers, and is a surviving feature of the town's 1635 English settlement pattern, which served as a prototype for subsequent land division and early town planning in New England. It has survived as a recognizable piece of land that was in private ownership for over 300 years.

- ***Revolutionary War History***

The meadow is adjacent to Lexington Road and was witness to the events of April 19, 1775.

- ***Literary History***

All of Concord's prominent literary figures lived on Lexington Road at one time and walked past the open land of the meadow, deriving inspiration from its pastoral beauty.

- ***Agricultural History***

Heywood Meadow was in continuous agricultural use for over 300 years and is one of the few surviving remnants of that use located near the town center.

- ***Pivotal Element in Concord's Historic Scene***

Heywood Meadow lies at a major entrance to Concord, is a pivotal element in the community's historic scene and functions as a setting for some of its most historic houses.

- ***Environmental Values***

Heywood Meadow is part of an extensive system of wet meadows and wildlife habitat, and an important link in the Mill Brook valley drainage area, which provides critical flood control and storm damage prevention for the town.

- ***Open Space and Aesthetic Values***

Heywood Meadow is a critical component of the town’s open space system and is recognized both for its recreational value and its visual prominence near the center of town.

PERIOD OF SIGNIFICANCE

The period of historical significance for Heywood Meadow extends from 1635 when the town was established to the late 19th century, which marks a transition in the appearance and use of the meadow. There may also be earlier significance derived from Native American use of the area. A period of significance that extends over nearly 300 years is remarkable for any property, but especially for one as fragile as a meadow located in the heart of a community.

SITE BOUNDARIES

During Concord’s early years the Mill Brook served as a boundary between properties located on the north and south sides of the brook. While this division is strongly reflected in early land ownership patterns, the Mill Brook valley has always been perceived as a single visual and ecological unit and should be treated as such. Lots A, 1, 2, 3 and Ford Park (shown in the darker tone below) are town owned and have been designated as conservation land. The narrow strip of land between Parcel A and the Mill Brook (shown in lighter tone) is town-owned land that is functionally and perceptually part of Heywood Meadow. The parcel along Walden Street south of the Mill Brook next to the police/fire station (shown in lighter tone) is town-owned but is not conservation land.

It must be noted that Parcel B (between Parcel A and Walden Street) was incorrectly noted in the original plan as municipal rather than conservation land. In fact, it was conveyed to the Natural Resources Commission as conservation land at the same time as Parcel A.

Figure 11. Map showing the extent and status of Heywood Meadow land parcels. Dark tone indicates town-owned conservation land. Light tone indicates town-owned land that is not conservation land, although part of it is wetland (see comment above). (Concord GIS base map)

INTEGRITY

For more than three centuries there has been a consistency in the boundaries, land use patterns and appearance of Heywood Meadow as a meadow and agricultural land that is truly remarkable for a New England landscape. While there have been changes, Heywood Meadow is noteworthy as a surviving cultural landscape with features that date to the 1630s. Many Concord properties have strong historical associations, what distinguishes Heywood Meadow is the extent to which it still reflects its historic appearance. This quality is called integrity, which is the authenticity of a property's historic identity or the extent to which a property evokes its appearance during a particular historic period. While evaluation of integrity is often a subjective judgement, particularly for a landscape, it must be grounded in an understanding of a property's physical features and how they related to its significance. The challenge is even greater when the landscape has evolved over several centuries and has an extended period of significance. The analysis of character defining features that follows illustrates key aspects of integrity.

CHARACTER DEFINING FEATURES

A character defining feature is a prominent or distinctive aspect, quality or characteristic of a historic property that contributes significantly to its historic character. Before modifications are made to the landscape, changes should be carefully evaluated for their impact on character defining features, which fall into four broad categories:

- ***Setting and Spatial Organization***

Spatial organization is the arrangement of elements within and around the site. The spatial organization of Heywood Meadow was established in the early seventeenth century by the presence of the Mill Brook, the location of the major roads, the arrangement of lots and the siting of houses. This pattern is still reflected in the landscape today (see diagrams on next page).

- ***Landscape Character***

The enduring landscape character of Heywood Meadow as a natural and historic resource is its quality as an open meadow. Meadow land was what drew settlers to this site in 1635 and what existed into the early 20th century (see Figure 16). Over the past 50 years, this quality has been altered by the growth of vegetation along the stream bank. Other features including vegetable gardens, tilled fields, orchards, houses and outbuildings have occupied Heywood Meadow at various times but do not have the same enduring quality.

- ***Mill Brook***

The Mill Brook was a narrow sluggish stream in 1635 and is essentially the same today. From 1636 to 1828 the western portion of Heywood Meadow was occupied by the Mill Pond.

- ***Walls and Fences***

Various types of enclosures have been used over the years to define the edges of Heywood Meadow. Dry laid fieldstone walls were most likely the first, there is also evidence of vertical board fencing and post and rail fencing in the late nineteenth century.

Setting and Spatial Organization

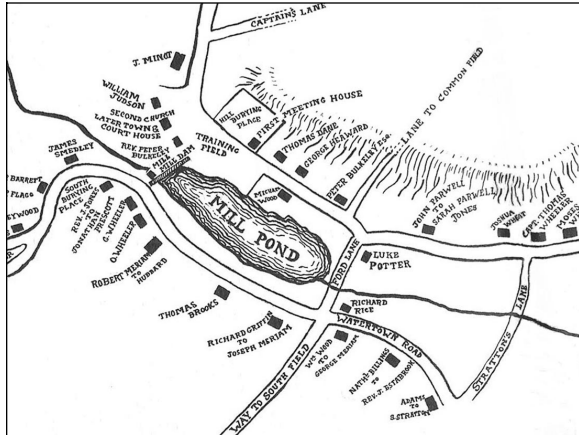

Figure 12

Detail of 17th Century Map by Ruth Wheeler

- Bay Road (Lexington Road), Watertown Road (Walden Street) and Ford Lane (Heywood Street) already extant
- Mill Pond located west of Heywood Street
- Houses located primarily north of Lexington Road and south of Walden Street
- Luke Potter house (burned 1731) on Heywood Meadow north of Mill Brook, Richard Rice house south of brook

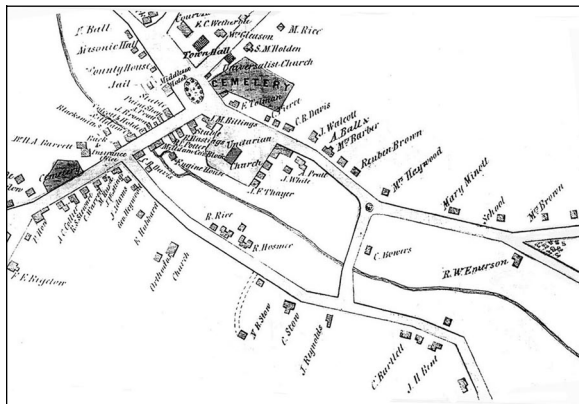

Figure 13

Detail of 1852 Walling Map

- Lexington Road, Walden Street and Heywood Street still clearly defined, Concord Turnpike visible at far right
- Mill Pond has been drained
- House number and locations similar to above
- Potter and Rice houses no longer extant, Bowers house has been built east of Heywood Street
- R. W. Emerson house at east end of Heywood Meadow

Figure 14

Detail of 2004 Map by Concord GIS

- Older roads as shown in 1852, many new roads added
- Mill Brook as shown in 1852
- Many more house lots, including on Revolutionary Ridge
- No buildings on Heywood Meadow except Gun House
- Heywood Meadow far more overgrown and no longer used for agriculture

Landscape Character and Mill Brook

The landscape character of Heywood Meadow is largely defined by patterns of vegetation and land use. During the settlement period the landscape was that of a wet meadow, flooded in winter and grassland in the drier summer months. In fact it is these very grasslands that gave the area its original name, Musketaquid, or “marsh grass river” and caused the English colonists to settle here. Meadow land is an essential and enduring characteristic of Heywood Meadow.

Figure 15. 1904 view of the Mill Brook upstream from Heywood Meadow, which might have looked similar when English settlers arrived in 1635. Note the meandering quality of the brook. (Concord Free Public Library)

Figure 16. 1942 view of Heywood Meadow looking west from Heywood Street. Although the grasses are different species, the quality of an open meadow is visually similar to what it had been for centuries, except that it is more enclosed by perimeter trees and buildings. In this view the brook has been dredged and straightened to increase flow. (Concord Free Public Library)

Walls and Fences

The stone walls around of the perimeter of Heywood Meadow are only remnants of the earlier walls. It is unknown when they were erected, although such walls were common in eastern Massachusetts by the mid-seventeenth century. Post and rail fences appear in several early twentieth century pictures of Heywood Meadow (see Figure 17 below and Figure 5 on page 9). A vertical board fence appears in an 1880 view along Heywood Street (see Figure 6 on page 9, probably to enclose an area for animals or a vegetable garden). The walls are now seriously degraded, with stones missing or fallen over and some sections capped with concrete.

Figure 17. Early twentieth century view of Lexington Road showing the stone wall in front of Heywood Meadow at the far right. (Concord Free Public Library)

Figure 18. Circa 2002 view showing deteriorated condition of the stone wall along Lexington Road.

4. TREATMENT RECOMMENDATIONS

APPROACH

The *Secretary of the Interior's Standards for Treatment of Historic Properties* identify four possible treatments for historic properties: preservation, rehabilitation, restoration and reconstruction. For a landscape like Heywood Meadow, where site surroundings, regulatory framework and ecological conditions have changed over time, literal restoration to an earlier period is not feasible. However, a rehabilitation treatment would re-establish the appearance of the meadow to the greatest extent possible.

The Heywood Meadow Stewardship Committee mission statement written in 2000 established a framework for rehabilitation, which is elaborated in the goals that follow.

“To rehabilitate all of Heywood Meadow (Lots A, 1, 2, 3 and Ford Park), so as to evoke the Meadow’s historical and agricultural past. This historic landscape should reflect the period from Colonial settlement through Concord’s Literary Renaissance (late 1800s). The rehabilitated meadow will accommodate passive recreation and further the conservation goals of the Town of Concord.”

This 2005 Landscape Plan focused on Lots A, 1, 2, 3, and Ford Park, although the latter was given short shrift, being separated from the other lots by the Mill Brook and being maintained by the Concord Public Works and not the Natural Resources Division. Furthermore, at the time this Plan was prepared it was thought that the land shown in “light tone” in Figure 11 (Parcel B) was municipal land, not conservation land that was part of Heywood Meadow. Parcel B should now be added to the mission statement, but as a result of its omission from the Plan, a number of the original goals cited below may not apply – or even have been intended – for “all of Heywood Meadow” as the mission statement describes.

For simplicity, Lots 1, 2, and 3 will be referred to as the “west meadow” (on the side of Heywood Street toward Concord Center) and Parcel A will be referred to as the “east meadow” (on the side of Heywood Street toward Boston). Ford Park and Parcel B will be identified as such.

Figure 19. East meadow in fall

GOALS

The following goals expand upon the mission statement and provide a framework for rehabilitation and stewardship of Heywood Meadow.

- Emphasize Heywood Meadow as the welcoming entry to the Town of Concord and a prominent reminder of Concord’s agrarian past.

The key words here are “welcoming”, “entry,” and “agrarian.” Entry refers to the route into Concord Center from the east via Lexington Road and Cambridge Turnpike which converge just east of the meadow and continue

as Lexington Road. It is worth noting that at the time the Landscape Plan was prepared, Parcel B was not recognized to be part of Heywood Meadow. Now that it is, there exist arguably two entries to Concord Center that pass by the meadow, Lexington Road and Walden Street; however the Committee considers Lexington Road to be the primary entry for purposes of this goal. Lexington Road is the central corridor of the American Mile Historic District which originates east of the meadow and passes by on its way to the bustling commercial core of Concord Center. In its description of the preservation goals of the American Mile Historic District, the Historic Districts Commission observes:

“The American Mile can almost be seen as an extension of Minuteman National Historical Park, and as such, is the first glimpse many visitors have of Concord. The vistas afforded by the meadows and the well-tended historic structures as well as the sense of history mingling with growth and change make Lexington Road an area that requires sensitive preservation.”

Concord welcomes people from around the globe to visit its historic sites, so the meadow, centrally located on the route between historic sites, is both on display itself and plays an important part in welcoming those who drive past as well as local residents who wish to spend time in Concord’s largest in-town open space. The stone steps into the west meadow, and the paths and benches in both the east and west meadows, are all intended to be welcoming.

Figure 20. Welcoming bench in east meadow

Stewardship of the meadow to reflect Concord’s “agrarian past” is perhaps the most challenging part of this goal. The Committee’s mission statement calls for “this historic landscape [should] to reflect the period from Colonial settlement through Concord’s Literary Renaissance (late 1800s).” Over this 250-year period, the meadow saw many uses. It was the site of at least three houses (those of Luke Potter, Richard Rice, and William Bowers) and likely assorted barns and outbuildings, including Bowers’ “shoe shop.” The land is variously described over these years as being devoted in whole or in part to “pasture,” “plowland and meadow,” and “orchard.” If the time period for rehabilitation were narrower, such as focusing on the Revolutionary Period to be consistent with the focus of

Minute Man National Historical Park, or the Literary Renaissance of the late 1800s, the task might be clearer. Short of that, the Committee has chosen to maintain the open portions of the east and west meadows – being the most visible from Lexington Road – as a meadow.

Recommendation: The Committee recommends this goal be revised to read:

- “Emphasize the open portions of the east and west meadows as the welcoming entry to the Town of Concord and a prominent reminder of its agricultural history in the 18th century.”
- Unify the Meadow’s separate parcels with the use of common plant treatments.

The east and west meadows currently have certain broad unifying features. Each is bounded by mature trees

and shrubs along the Mill Brook to the south and each is bounded by Lexington Road to the north with largely open space between. There are important differences as well. The east meadow has a row of trees along Lexington Road and the remnants of an apple orchard, neither of which exist on the west meadow.

Along the Mill Brook, the Committee has made an effort to eliminate invasive plants in both meadows, an effort that continues. Other non-plant features that unify the meadow include the stone walls along Lexington Road which have been rebuilt in similar style, the mown paths that diagonally bisect both east and west meadows, and the benches placed adjacent to those paths.

After completion of the stone wall on the west meadow in 2016, the disturbed area was graded and reseeded with two different “meadow mixes.” Shortly thereafter, dozens of plugs of various species of native flora were planted by hand. Both of these interventions introduced plants generally not present on the east meadow, some of which grow to a height that obscures one’s view while standing in the west meadow. The Division of Natural Resources (DNR) intends to manage the height of these plantings to be consistent with the east meadow to allow clear and open vistas both within the west meadow and across Heywood Street to the east meadow.

Figure 21. Well-used path through east meadow

Figure 22. Black-eyed susans in west meadow

The Committee does not intend to unify its treatment of Ford Park and Parcel B; neither will be managed like the east and west meadows, nor like one another. Ford Park will continue to be managed as a park with regular mowing. New appreciation for the potential of Parcel B has introduced the possibility of expanding the Committee’s pollinator efforts – a small “pollinator garden” funded by contributions it received in memory of a founding member of the Committee, Marion Grabhorn, and planted in 2019, and other pollinator plantings in 2015 and 2020 – into a full-fledged pollinator meadow along Walden Street, leaving the east and west meadows to be managed with common plant treatments - largely “meadow grasses” - as originally intended in the 2005 Plan. (See “Landscape Character Recommendations, Meadow Treatment”)

Recommendation: The Committee recommends this goal be revised to read:

- “Unify and maintain a visual connection and coherence between the open areas of the east and west meadows with the use of common plant treatments.”

- Evoke the agricultural past of Heywood Meadow through the addition of historically appropriate plantings, fencing, walls, and field management practices.

“Agricultural past” is substituted here for “agrarian past” as used in the first goal suggesting strongly that they be understood as synonyms. Nevertheless, identifying “historically appropriate plantings, fencing, walls, and field management practices” is challenging because the meadow was put to a wide variety of uses during the broad historical period from colonial settlement through Concord’s Literary Renaissance (late 1800’s).

Although this goal is focused on the “addition” of historically appropriate features, the Committee has also focused on removing historically inappropriate features such as an historically inappropriate portion of stone wall capped with concrete running along Heywood Street on the west meadow. It has also rebuilt the stone walls on both east and west meadows and introduced stone steps into the west meadow from the sidewalk along Lexington Road. There is another small section of concrete-capped wall on the west meadow closer to the Mill Brook in the Heywood Street right-of-way that is deteriorating on the side away from the sidewalk, making its condition difficult to see. It has been reported to Concord Public Works (CPW) and is on their work plan for repair. However, when CPW replaces the wall, the Committee urges that it be replaced with a wall that is similar to the walls along Lexington Road which do not have a concrete cap.

Two historically inappropriate galvanized metal posts that define the location of a former gate into the west meadow near the bridge over the brook should also be removed. Historically inappropriate chain link fencing that once ran along the western lot line of the west meadow was removed and replaced with a split rail fence by the abutter, but the Committee decided to introduce a new fence – a less visually obtrusive rope fence - along the west end of the east meadow for the purpose of discouraging parking along that section of Heywood Street.

A short, low stone wall still stands on Parcel B opposite 148 Walden Street – site of the Walden Street School. The Committee will address the future of this wall at a later date after a decision has been made by the Town on reconfiguring the Walden Street / Heywood Street intersection as suggested by the Committee.

The east and west meadows were once mowed regularly, creating the inappropriate appearance of a turf field. Field management practices have been revised, reducing the number of times these meadows are

Figure 23. Eastern bluebird nesting in meadow

mowed each season to encourage meadow forbs and grasses to develop and drop their seeds. More recently, the east and west meadows were mowed once each year in the late fall, and a portion of the east meadow was mowed before Memorial Day to allow the Concord Independent Battery, upon invitation of the Public Ceremonies and Celebrations Committee (PCCC), to discharge their cannons on the east meadow in coordination with the ceremonies in the Town center. In 2022, the Battery collaborated with the PCCC to fire from Sleepy Hollow Cemetery, eliminating the need for that additional mowing.

Recommendations: The Committee recommends this goal remain unchanged.

The Committee also recommends an additional goal be adopted to emphasize the importance of meeting the

Town’s conservation goals on all of Heywood Meadow.

- Meet the Town’s conservation goals throughout Heywood Meadow in a manner that is historically appropriate.

Figure 24. Historic cannons on the east meadow for Memorial Day

- Protect the Mill Brook Corridor and its watershed to promote an ecologically sound and scenic stream environment.

The Mill Brook rises in Lincoln and flows three miles westward through the entire length of Heywood Meadow before eventually emptying into the Concord River just upstream of the Old Manse. In addition to Lexington Road, it provides another important connection between the Battle Road Unit of Minute Man National Historical Park and the North Bridge Unit of the Park.

The short stretch of brook west of Heywood Street and east of the Milldam was once a mill pond. During the Town’s early years when it played an important role in the economic lives of Concord residents, the brook was dredged and its channel straightened, but in recent years it has been allowed to renaturalize. Richard Forman once described the Mill Brook as “one of the most degraded streams in Concord” in Concord’s Mill Brook: Flowing Through Time (1997).

There can be a tension between creating an “ecologically sound” stream environment and a “scenic” stream environment. The challenges inherent in reconciling this tension have discouraged the Committee from addressing this goal since the Plan was adopted in 2005. However, recognizing that it is through Heywood Meadow that the brook is perhaps more visible to the public than at any other point along its route, the Committee has recently rededicated itself to its stewardship of the brook by opening up the understory along the brook by removing invasive plants, while maintaining the overstory, in an effort to provide Concord residents with a greater appreciation of this overlooked yet important natural resource.

Recommendation: The Committee recommends this goal be revised to read:

- “Protect the Mill Brook and its watershed to promote an ecologically healthy and scenic stream environment. All the meadow parcels are part of the Mill Brook corridor wetlands and watershed and

fall within the scope of the Massachusetts Wetlands Protection Act and the Concord Wetlands Bylaw.”

- Reconnect Heywood Meadow to other historic landscapes and structures by selectively creating open views to related areas and making recommendations to the Town Manager regarding maintenance of adjacent town parcels.

This goal has two parts and might better be separated into two distinct goals, one dealing with “creating open views to related areas” and the other “making recommendations to the Town Manager regarding maintenance of adjacent town parcels.” The latter reference may best be understood as a reference to Parcel B which in 2005 was thought to be municipal land under jurisdiction of the Select Board. Given the variety of proposals for use of the meadow for both municipal, and even county, purposes which have been raised over the years, it would be prudent for the Committee to be vigilant lest another such proposal materialize. With the status of Parcel B now clarified as part of Heywood Meadow under jurisdiction of the Natural Resources Commission, this part of the goal could be dropped or reworded.

However, there are two lots (Lot 12A located between 105 Lexington Road and 181 Lexington Road which is municipal land, and Lot 17A located between 181 Lexington Road and 195 Lexington Road which is conservation land) on the north side of Lexington Road which the Committee has an interest in being kept open and maintained in a manner consistent with the goals of the meadow.

In addition to matters of maintenance, there are other matters about which the Committee might choose to make recommendations. For example, there are opportunities for proposals from Concord Public Works to rework intersections (as it did the intersection at the junction of Lexington Road and Cambridge Turnpike in 2019/2020) or add signage in the right of way. And there is constant parking pressure on all the streets adjacent to the meadow that may cause the Committee to make recommendations to the Town’s Transportation Advisory Committee in the future.

The Committee has not intentionally created new “open views to related areas” as much as it has been conscious not to block existing views by planting large trees where none existed before. When a large maple along Lexington Road in Lot A died several years ago, it was replaced with a tulip tree, which did not survive the winter of 2021. Two sugar maples were planted in the spring of 2022 to replace the tulip tree and a nearby dying sugar maple.

Recommendation: The Committee recommends this goal be revised to read:

- “Work with the Town and meadow abutters to help maintain the surrounding areas in a manner consistent with the meadow’s goals and attributes (vistas, signage, sidewalks, etc.). Keep Heywood Meadow connected to other historic landscapes and structures by maintaining open views.”
- Enhance the Meadow’s scenic and contemplative qualities and highlight its historical relationship with adjacent 18th and 19th century structures and roads, especially the historic Bay Road (Lexington Road) and Potter’s Street (Heywood Street).

This goal incorporates aspects of the first and fifth goals: “emphasize Heywood Meadow as the welcoming entry to the Town of Concord...” and “reconnect Heywood Meadow to other historic landscapes and structures.” What appears for the first time is emphasis on roads. Highlighting the historical relationship between the east and west meadows and Lexington Road is problematic because the road has changed so much over the years both in elevation and traffic volume. Yet assuring that roadside signage does not proliferate, and the aspect of the meadow remains calm and contemplative, would seem to fulfill much of the intent of this goal. The Committee wants to encourage native grasses in the east and west meadows in

particular to provide a peaceful, pastoral appearance.

Recommendation: The Committee recommends this goal be revised to read:

- “Enhance the historic, scenic, and contemplative qualities of the east and west meadows by emphasizing native grasses.”

The Committee also recommends the following two goals be adopted:

- Implement the Town’s biodiversity goals by removing invasive species from Parcel B and create a dedicated pollinator meadow with an emphasis on plant diversity.
- Differentiate the treatment of Ford Park from the other parcels within Heywood Meadow by maintaining it as a park and not a meadow.
- Remove structures and associated landscape elements that do not relate to the time period established for the rehabilitation. These will include, but may not be limited to: the garage on Lot 3, the information booth on Lot A, and associated paved areas. The Concord Gun House will be retained.

Figure 25. Clapper stone and bench in west meadow

The Committee is pleased to report that this goal has been met in its entirety with three minor exceptions, the first two of which were noted in the discussion of goal #3 above. The Committee is committed to removing the two galvanized metal gate posts. The remaining concrete-capped wall cannot be removed because it serves as a retaining wall for the sidewalk. The third exception is the clapper stones which were moved to their present location on the west meadow by the Town when work was being done on Hawthorne Lane in the 1990s. These will remain in their current location on the west meadow.

The list of structures that have been removed from the meadow include: the garage and associated paved area on Lot 3, the root cellar on Lot 3, the information booth on Lot A, and the transformer belonging to the Concord Municipal Light Plant behind the Gun House on Lot A.

Recommendation: The Committee recommends this goal be revised to read:

- “Remove the remaining landscape elements that do not relate to the time period established for rehabilitation which include the galvanized gate posts on Lot 3. The clapper stones and the Concord Gun House will be retained.”

LANDSCAPE CHARACTER RECOMMENDATIONS

Meadow Treatment

The most enduring quality of Heywood Meadow is its character as an open meadow. The original wet meadow was dependent on seasonal flooding to keep it open. During the three centuries of agricultural use it was maintained by livestock and/or periodic mowing. More recently sections adjacent to the brook have grown up into shrub swamp while upland areas have been converted to turf grass. A meadow-like appearance would more accurately convey the historic character of the area and, once established, would also require less maintenance.

- Re-establish meadow grasses throughout Heywood Meadow (Parcels A, 1, 2, 3) to restore the historic character of the meadow landscape.

The east and west meadows were once mowed regularly, creating the inappropriate appearance of a turf field. The change to an annual mowing regime on the open portions of the east and west meadows has enabled meadow forbs and grasses to re-establish themselves.

Figure 26. West meadow in summer

Certain native grasses would more accurately convey the historic character of the meadow and would provide a common plant treatment for the open portions of the east and west meadows which would unify them visually and provide clear and open vistas across Heywood Street.

Ford Park and Parcel B are currently mowed regularly resulting in the appearance of turf parcels. The Committee intends to continue to manage Ford Park as a park and not as a meadow by allowing regular mowing. Once converted to a pollinator meadow, Parcel B will likely only be mowed annually.

Mill Brook

Historically the banks of the Mill Brook were kept open either by periodic flooding, by grazing or other agricultural use. Today the brook has become overgrown and nearly invisible as it travels through the meadow and the rest of downtown Concord.

- Manually remove invasive vegetation to the meadow edge to open up wooded areas and to free the brook, particularly on the north side. Establish ground plane that can be mowed along with the rest of the meadow.

The observation that the Mill Brook “has become overgrown and nearly invisible” is even more true today than when these three recommendations were adopted in 2005. Nevertheless, between the Massachusetts Wetlands Protection Act (1972) which established protection of wetlands including a 100-foot “buffer zone,” the Massachusetts Rivers Protection Act (1996) which amended the Wetlands Protection Act and established

a 200-foot “riverfront area” from the banks of perennial streams including the Mill Brook, and the Concord Wetlands Bylaw (2009) which established a 25-foot “no disturb zone” from wetlands, the Committee’s hands have been largely tied from implementing these recommendations broadly.

Figure 27. Mill Brook

However, the Committee recognizes the historic character of the Mill Brook and its ongoing presence in the vernacular of Concordians who continue to refer to the “Milldam” in the heart of Concord center and is committed to focusing more attention on the brook now that the three stone wall projects have been finished.

The Committee implemented a program using CPA and DNR funds to remove invasives from the area between the brook and the open meadow to the north, but the effort was resource constrained, and the contractor relocated out of state. With the

hiring of a Land Manager in March 2021, this effort was reinvigorated and a major volunteer invasives removal initiative with a new contractor was undertaken in July 2021, removing substantial invasive undergrowth along both sides of the Heywood Street bridge, and opening up views of the brook. The Committee intends to maintain this effort and expand it to include the south side of the brook on both sides of Heywood Street to the extent resources allow.

- Coordinate with other agencies to assure that all municipal actions are consistent with the goal of preserving and re-establishing the historic character of the brook and its watershed.

The Committee understands that permits will be required to implement its plans along the Mill Brook and looks forward to working with the Natural Resources Commission to implement its plans.

- Explore other options for making the entire length of the Mill Brook more visible and creating linkages among the many open space parcels along it.

Plans prepared by Ewing Associates in 2001 show how “windows” could be opened up intermittently along the brook as it passes through Heywood Meadow. There is a foot path that currently follows the brook from the east side of the Heywood Street bridge ending at the trailhead of the Emerson Thoreau Amble. This path has “windows” on the brook in several places. The Committee is considering how best to provide pedestrian access along the south side of the brook. Making the entire length of the brook more visible will likely not be possible under current regulations.

Topography

West of Heywood Street, Lexington Road has been raised over time and is now several feet higher than the meadow, creating an awkward relationship between the two and making the portion of the meadow adjacent to the road separate.

- Consider raising the grade of the meadow adjacent to Lexington Road to more accurately reflect the historic character of the road relative to the meadow.

Before rebuilding the wall along Lexington Road in the west meadow, the Committee considered this recommendation, but chose not to pursue it for three reasons. First, it would create an awkward transition along the west lot line shared with a neighbor; second, it begged the question about how the relationship between the road and the meadow should be treated in the east meadow; and third, the benefits of raising both the east and west meadows to align with Lexington Road didn't seem to justify the costs. The Committee chose instead to install a set of steps allowing pedestrian access to the west meadow from the sidewalk level along Lexington Road. The steps have seen substantial use since their construction.

Perimeter Trees

Historic photos (Figure 7 on page 10 and Figure 17 on page 19) indicate that in the late nineteenth and early twentieth century trees along Concord's roadways, especially American elms, formed a strong vertical presence that defined the edges of the roadways and created clear separation between the road and the adjacent land. The present trees along the western edge of Heywood Street, and to a lesser extent, those along Lexington Road, continue to function in this way although they are more regularly spaced. Other edges are not well defined by street tree plantings.

- Retain current tree plantings along Lexington Road and Heywood Street but do not replace.

The Committee made the conscious decision to replace a maple tree along Lexington Road in the east meadow with a tulip tree. The tulip tree did not survive the winter of 2021 and was replaced by a sugar maple in the spring of 2022. A second sugar maple was planted at the same time to replace a dying sugar maple nearby.

- Remove nursery trees. Perform periodic maintenance on mature apple trees but do not replace.

Figure 28. Trees and rope fence along Heywood Street (east meadow)

The “nursery trees” referred to here consisted of four small apple trees planted on the west meadow. These trees were ultimately transplanted to Orchard House (399 Lexington Road) where they now form the core of the restored apple orchard for which Orchard House is named.

From time to time, the Committee has been approached by Concord citizens asking if they could plant one or more small apple trees in the east meadow. The Committee evaluates these requests on a case-by-case basis.

The mature apple trees on the east meadow are periodically pruned by Town staff supplemented by pro bono efforts from local arborists.

- Prepare a planting plan to create a physical separation between the street and the meadow while ensuring the openness and tranquility of the meadow.

The Committee has not yet prepared the recommended planting plan. If such a plan is prepared in the future, the Committee will need to reconcile this recommendation “to create a physical separation between the street and the meadow” with Goal #5: “Reconnect Heywood Meadow to other historic landscapes and structures by selectively creating open views to related areas...”

Pedestrian Circulation

The meadow should be a welcoming and accessible place for people who wish to visit but should retain its character as a historic meadow as distinct from a park. There is an informal path from the Heywood Street bridge to the Gun House and also a worn path along the north side of the brook.

- Maintain one or more mown paths through the meadow for pedestrian use.

The “worn path along the north side of the brook” can be identified by red blazes and is maintained by the Trails Committee. The Committee is considering how best to provide additional pedestrian access along the south side of the brook.

In addition to the two paths referenced in the 2005 text above, the Committee has created a second informal path from the northwest corner of the west meadow - where a set of stone steps was incorporated into the rebuilt stone wall – to an even more informal street crossing at the mid-point of Heywood Street. To enhance pedestrian safety, the Committee is exploring with the Town’s Engineering Division if a formal crosswalk could be located in this location or at the intersection of Heywood Street and Walden Street.

The Committee has also created side paths that connect the main paths in each meadow to other attractive features; in the west meadow to a bench near the clapper stones and in the east meadow to the trailhead of the Emerson Thoreau Amble and to the east end of the “worn path along the north side of the brook.”

Walls and Fences

Figure 29. Reconstructed stone wall in west meadow

Figure 30. Reconstructed stone wall in east meadow

The stone walls which line Lexington Road and the western section of Heywood Street are important

character defining features of Heywood Meadow that have become deteriorated over time. Historic pictures of stone walls in Concord (see Figure 17 page 19, far right) show walls as dry laid fieldstone approximately 30” high. The current appearance along Lot A (Figure 18 on page 19) shows that only remnants of the wall exist in this section while the wall in the western portion of Heywood Meadow has been poorly repaired with concrete. Rebuilding these walls would greatly improve the character of Heywood Meadow and create some separation between the meadow and the adjacent street.

- Consider rebuilding stone walls along the northern edge of Lot A and around Lots 1, 2 and 3. Determine which walls are historically appropriate. Any rebuilding would use historically appropriate techniques.

Figure 31. New steps and reconstructed wall in west meadow

Much of the Committee’s time and effort over the last ten years has been spent responding to this recommendation. With resources from a \$75,000 CPA grant received in 2011 along with funds contributed by the Committee and the Concord Independent Battery, the Committee rebuilt the stone wall separating Lot A from Lexington Road. A second CPA grant of \$88,000 received in 2014 allowed the Committee to remove a portion of stone wall between Heywood Street and the west meadow, and rebuild the remaining portion of wall separating Lot 1 from Lexington Road. This project included the addition of stone steps into the meadow, greatly increasing public use of the west meadow.

Finally, a third CPA grant of \$20,000 received in 2019, along with funds from the Natural Resources Division, allowed the Committee to remove several unsightly and non-historic bollards separating the northbound lane of Heywood Street from the east meadow and replace them by extending the rebuilt stone wall around the corner, echoing the curvature of the wall on the opposite (west) side of Heywood Street. That work was completed in September 2021.

- The Heywood Meadow Stewardship Committee has proposed use of a rail fence along the east side of Heywood Street as a temporary measure to prohibit parking in this area and to allow the former visitor center site to be revegetated.

Figure 32. East meadow rope fence and path

Having reflected on this recommendation, the Committee felt that a traditional split rail fence would impose a visual separation between the east and west meadows that would conflict with the recommendation to coordinate the management of the east and west meadows expressed in the second and third goals. Instead, the Committee installed a rope fence running through wooden 2x4 posts.

- Consider appropriateness of using rail fencing or identify other effective means of preventing unauthorized parking along the east side of Heywood Street. Reevaluate the effectiveness of the method chosen as necessary.

See note immediately above.

Structures and Small-scale Features

Figure 33. Concord Gun House

The Gun House was built in 1960 to house the equipment of the Concord Independent Battery. While it is a modern structure, it is based on historic designs for similar buildings. The building itself is in good condition and supports an appropriate use of the meadow.

- Work with Concord Independent Battery to assure that Gun House and its immediate surroundings are maintained in a manner that is consistent with the conservation purpose of the adjacent land, while meeting the appropriate needs of the Battery.

The Concord Independent Battery stores the Town's two six-pound cannons in a gun house which was built on the meadow in 1960. It participates in historical and memorial events at the request of the Public Ceremonies and Celebrations Committee under agreement with the Town, and in certain other events with permission of the Town Manager. Its obligations to maintain the gun house are spelled out in the agreement.

Since 2004, a member of the Battery has served as a voting member of the Committee. This has greatly improved communications between the Battery and the Committee, allowing the Committee to be informed of the activities of the Battery on an ongoing basis.

- Explore options for screening the electrical boxes located behind the Gun House.

Screening was planted in the early 2000s to obscure the electrical boxes located behind the Gun House. A few years later the electrical boxes were removed by the CMLP. The plantings remain and now look a bit anomalous, but they provide some landscaping for the sign to the Emerson Thoreau Amble, and the Committee intends to allow them to remain.

- There is currently no way for passers-by to identify Heywood Meadow. An important step in expanding awareness and understanding of the meadow would be to provide an informational sign.

Two signs which bear the name of the meadow have been installed. Both face the intersection of Heywood Street and Lexington Road, one in the east meadow and one in the west meadow. The Committee is considering additional signage, possibly incorporating the use of QR codes.

- Install a freestanding informational sign similar to other conservation signs in the Town. Include name of meadow, date established and very brief history.

See note immediately above. The two signs currently in place bear only the name of the meadow. While committed to identifying the meadow, the Committee has wanted to minimize both the number and size of signs in and around the meadow, including in the right-of-way.

Two historic clapper stones from other sites within Concord have been retrieved and are lying in the western part of Heywood Meadow. While they are not original to the meadow, they present a unique story about early transportation.

- Relocate clapper stones to form a pedestrian footbridge over the Mill Brook.

The Committee has intentionally not followed this recommendation out of concern for the safety of pedestrians who might try to use such a bridge.

Heywood Meadow is a natural and historic landscape rather than a park.

- Provide limited number of benches in an appropriate rustic style, preferably no more than three in total on the meadow.

The Committee has installed three wooden benches in the meadow, two in the east meadow and one in the west meadow. All three benches are located slightly off the mown paths, and short side paths are mowed and maintained between the main paths and the benches. The benches were repaired and reinstalled in June 2021 by a generous volunteer. There is one granite bench currently in Ford Park, and one additional wooden bench is planned to be installed in Ford Park as resources become available.

- Plaques and other commemorative markers are not consistent with the rustic character of the meadow and should be prohibited. The Concord Independent Battery should be allowed to maintain a sign in front of the Gun House.

The Committee has not allowed plaques or commemorative markers to be installed on the meadow. The Committee did support three pieces of sculpture installed on the meadow by the Emerson Umbrella in the spring of 2021. The Umbrella followed the established permitting procedure, and because these were temporary installations, no precedent was set.

The root cellar located on Lot 3 dates to the early twentieth century and is considered outside the period of significance.

- Remove root cellar.

The root cellar located on Lot 3 was removed in 2007.

ADMINISTRATIVE/MANAGEMENT RECOMMENDATIONS

Protection Mechanisms

Most of Heywood Meadow is included in the American Mile Local Historic District, while Ford Park is included in the Main Street Historic District. Thus, any projects impacting the meadow are subject to review by the Concord Historic Districts Commission. All of Heywood Meadow is included within the Concord Monument Square-Lexington Road National Register District. Any federal or state projects that would impact the meadow are subject to review by the Massachusetts Historical Commission. Areas along the Mill Brook are designated wetlands and fall under the jurisdiction of the Natural Resources Commission. Each of these regulatory processes provides an opportunity for review and comment on any proposed actions that would impact Heywood Meadow. Utility lines, road improvements, sidewalks, signage, bridge work and curbing can cumulatively have an enormous impact on Heywood Meadow, particularly its vulnerable perimeter. The Heywood Meadow Stewardship Committee should remain perpetually active and vigilant in its review of all proposed actions that may impact the meadow and should work with other boards and agencies to coordinate efforts.

Over the years, there have been several proposed uses of Heywood Meadow as a site for a municipal/public safety building, a county courthouse, and a visitors' center. One such proposal caused Historic Massachusetts, a statewide preservation lobby, to name Heywood Meadow "one of the state's ten most-endangered historic resources" according to a Boston Globe article from September 1998. Historic Heywood Meadow remains open for the public to enjoy today because of the foresight, vigilance, and hard work of numerous Concordians who fought off these proposals.

The re-engineering of the intersection of Lexington Road and Cambridge Turnpike provided the most recent opportunity for the Committee to exercise its vigilance. The plan for the intersection contained a sidewalk which terminated on the doorstep of the meadow - at the property line between the meadow and land belonging to the Ralph Waldo Emerson Memorial Association. That terminus begged the question of what pedestrians would do when they reached the abrupt end of the sidewalk. Wanting to head off any such plan before it took shape, the Committee voted to register its opposition to extending the sidewalk to Heywood Street.

Across Lexington Road there is a vacant lot (12A) owned by the Town for "municipal purposes," not conservation. The Committee supports changing the designation of that lot to conservation to protect the meadow's surroundings.

Boundaries of Heywood Meadow

Historically, Heywood Meadow extended from Lexington Road to the Mill Brook. Land along the south side of the Mill Brook served as pasture and agricultural land for the houses along Walden Street and thus was similar in function and character to Heywood Meadow. Today the small parcel on the west side of the Mill Pond known as Ford Park, which has been designated as conservation land, is generally considered to be part of Heywood Meadow. The municipally owned parcel south of Lot A includes land north of the Mill Brook, which is perceived as part of Heywood Meadow, as well as land south of the brook which is not considered part of the meadow.

- The current five parcels of conservation land and the narrow strip of town-owned land between Lot A and the Mill Brook form the logical boundaries of the Heywood Meadow conservation area. Designate the strip of town-owned land between Lot A and the Mill Brook as conservation land and place it under the jurisdiction of the Natural Resources Commission and the Heywood Meadow Stewardship Committee (see Figure 11 on page 15).

This recommendation required no action on the part of the Committee. It is worth noting, however, that both this parcel and the parcel between the brook and Walden Street (Parcel B) are not only part of Heywood Meadow under jurisdiction of the NRC but are also part of the American Mile Historic District.

Surrounding Streets

Heywood Meadow is located adjacent to Lexington Road and is bisected by Heywood Street. Both are heavily traveled roads that must accommodate trucks and emergency equipment from the nearby fire station as well as smaller vehicles. One of the greatest threats to the historic character of the meadow is the impact of the adjacent traffic, whether it be noise, air pollution or the visual clutter of the modern roadway and its barrage of signs. Addressing these issues is critical to the character of Heywood Meadow.

- To preserve the historical significance of the site, assure that the impacts of the roads and motor vehicle traffic are mitigated to the highest extent possible. Road-related impacts can best be addressed through active stewardship and careful review of any proposals that may alter the character of the roadways.

The Committee continues to be concerned about parking on the streets surrounding the meadow, the proliferation of traffic signs, and the lack of an adequate crossing in the middle of Heywood Street where the Bay Circuit Trail and the Committee's mown paths coincide to connect the east and west meadows.

The rope fence on the east side of Heywood Street has been successful in discouraging parking along that stretch of roadway. Compliance with the No Parking signs along Walden Street and Lexington Road varies depending on the activities at the Walden Street School, First Parish, Concord Art, and the Gun House. The Walden Street School received site plan approval from the Planning Board in 1978, amended most recently in 2004, requiring the school to provide off-street parking on its property at 148 and 160 Walden Street, but overflow parking is always a threat.

The Committee has observed a proliferation of traffic signs, particularly along Lexington Road, the area's most heavily travelled roadway. The Committee appreciates the priority of the Town's public safety obligations and endorses the 20 mph speed limit in the westbound direction on Lexington Road, but would like to establish a dialog with those departments responsible for public safety to ensure that redundant signage can be eliminated whenever possible.

See also the note above under "Protection Mechanisms" for a description of the Committee's response to the re-engineering plan for the Lexington Road/Cambridge Turnpike intersection.

Education/Interpretation/Outreach

A responsibility of the Heywood Meadow Stewardship Committee is to build understanding of and support for Heywood Meadow by raising public awareness of the history and special values of the meadow.

- Distribute informational materials about Heywood Meadow at all appropriate public facilities and maintain a Committee presence at special events.

The Committee has always been keen to provide educational opportunities about the meadow, but has taken a slightly different approach, using articles in the Concord Journal as its primary means of communicating with the public. Articles in recent years have focused on rebuilding the stone walls, a high school student's volunteer efforts to remove invasive plants in the summer of 2021, and on the six goats which the Committee engaged in the summer of 2017 to help remove invasive plants from a portion of the east meadow.

The Committee has a page on the NRC website with a continuous loop of photographs of the meadow.

The Natural Resources Division has prepared a trail map of the Emerson Thoreau Amble which begins at Heywood Street and crosses the east meadow on one of the Committee’s mown paths before entering the adjoining property belonging to the Ralph Waldo Emerson Memorial Association and continuing through the Town Forest to Walden Pond. This map, which is publicly available, shows the trails through the east meadow.

- Establish an endowment fund for the meadow.

The Committee has not established an endowment fund for the meadow. Instead, the Committee has made three applications to the Community Preservation Committee for CPA funds to finance its largest projects – wall reconstruction. Limited funds are also available through the Natural Resources Division budget to fund

the invasive removal program and the purchase of certain plants. Generous grants from the Garden Club have provided funds to plant daffodils and pollinator plants. Contributions, both financial and in kind, are also accepted from Concordians who want to support the Committee’s stewardship efforts.

In-kind support for the Committee’s activities is also made available through the Natural Resources Division which allocates time from the Land Manager and Conservation Crew schedules to Heywood Meadow.

Figure 34. West meadow path and native grasses

- Involve other civic and community groups in activities to increase awareness and support for Heywood Meadow.

The Committee has held “workdays” on the meadow from time to time, involving members of the Committee, Heywood Meadow neighbors, members of the Natural Resources Commission, and other volunteers. With the arrival of the Land Manager, the ability to organize and focus work parties on the meadow has been greatly improved.

Use and Special Events

Most public landscapes, especially those such as Heywood Meadow, are under constant pressure for uses that may or may not be appropriate.

- Follow established guidelines for what uses and activities are allowed. Establish special events procedures for use of the meadow as is consistent with town conservation land.

The Committee has adopted “Heywood Meadow Usage Guidelines” which incorporate the Concord

Conservation Land Regulations in their entirety. When applications for special events are received, the Committee makes a recommendation to the Natural Resources Director who issues a permit, if appropriate.

- Use of the meadow by the Independent Battery in connection with historical and memorial events is considered an appropriate modern use of the meadow.

The Battery uses the Gun House and adjacent area on the east meadow for training and as a staging area for activities which occur off-site.

Maintenance

A critical aspect of Heywood Meadow stewardship will be an effective maintenance plan that addresses all aspects of preserving and maintaining the meadow.

- Once landscape preservation plan is finalized, prepare maintenance plan in conjunction with the Department of Public Works and the Natural Resources Commission.

The Landscape Preservation Plan was adopted by the Natural Resources Commission in 2005, but the Committee has not completed this recommendation by preparing a specific maintenance plan in conjunction with the Concord Public Works and the Natural Resources Commission.

Archaeology

The long period of use with relatively little disturbance means that Heywood Meadow is likely to contain valuable archaeological resources.

- Commission a preliminary archaeological assessment of Heywood Meadow to determine likelihood of pre-historic and historic resources.

Neither the Natural Resources Commission nor the Committee has commissioned an archaeological assessment of the meadow.
