Semi-Solid Stain

This unique semi-solid/semi-opaque finish masks the wood grain but allows texture to show through. While **Semi-Solid Stains** provide greater opacity, they still highlight the natural texture of wood and provide a deep-penetrating, flat finish. Review **our opacity scale** to determine your perfect balance of color and protection.

COLORS AND FINISHES EXTERIOR COLORS

To choose the right stain, you must first determine your desired balance of color and protection, which is also known as opacity.
